

J&P REINFORCED
CONCRETE SPECIALISTS

“Retaining a Concrete Reputation”

Reinforced Concrete Specialist Ltd delivers high quality reinforced concrete works for projects across the UK. From energy facilities and rail infrastructure to commercial buildings, basements and car parks, we're trusted by major contractors and developers who expect structures built to the highest standards.

Our team combines deep experience, technical precision and a reputation earned through consistency.

Our Story & Experience

Since our formation, we've built a reputation for reliability, professionalism and workmanship that stands the test of time.

Our people bring decades of reinforced concrete experience across the UK construction and civil-engineering sectors. We've supported main contractors and developers on complex frameworks, bases, and structural pours in demanding environments. From rail corridors and energy sites to multi storey car parks and large commercial developments.

How We Work

We believe strong structures start with strong collaboration.

Our work often begins long before concrete is poured. Providing early input on design, sequencing and value engineering to help clients save time and cost. Once on site, we operate with discipline and efficiency, ensuring safe environments, clear communication and strict quality control.

Every project is led by experienced supervisors and delivered by skilled tradesmen who understand both the craft and the programme.

Core Services

Reinforced Concrete - We construct robust, high performing structures. Foundations, slabs, retaining walls and more.

Estimating & Pricing - Fast, accurate and transparent quotations with full scope clarity to support tendering and planning.

Planning / Early Involvement - Collaborative input at design stage to identify efficiencies, resolve challenges and Optimise build ability.

Formwork - Modern systems and bespoke solutions to achieve precision, alignment and superior finishes.

Concrete - Controlled batching, placement and finishing to deliver consistent strength, performance and appearance.

Health & Safety

Nothing matters more than safety.

We maintain a zero compromise culture that protects our work force and everyone on site. Our operatives are fully trained and certified, supported by regular toolbox talks, safety audits and continuous improvement reviews.

From pre-start planning through to completion, we follow strict procedures and maintain compliance with all industry standards. Ensuring every task is completed safely, correctly and confidently.

Technical Capability & Quality

Precision is what defines our work.

We combine proven construction techniques with modern form work systems and rigorous quality management. Each stage, from reinforcement to pour, is closely monitored to guarantee strength, accuracy and finish.

Our materials are responsibly sourced, our standards uncompromising. It's why our concrete structures continue to perform in the most demanding sectors and environments.

Sectors We Work In

Our experience spans a wide range of sectors and specialist environments:

Energy – Reinforced structures for power and renewable facilities.

Rail – Complex, time-critical works within operational and new-build rail infrastructure.

Car Parks – Multi storey and surface structures with precise tolerances and durability.

Basements – Structural slabs, walls and waterproof retaining solutions in confined environments.

Commercial Buildings – Concrete frames, cores and foundations for new-build and refurbishment projects.

Water Infrastructure – Tanks, treatment works and associated reinforced structures.

Whatever the scale or complexity, we bring the same precision, control and commitment to quality.

Why Choose Us

- Proven expertise across multiple sectors.
- Early involvement and proactive planning.
- Commitment to safety and precision.
- Skilled, experienced workforce.
- Trusted by leading contractors nationwide.
